2016-2026 | 32 categories | Complete weekly observations

More papers. A smaller short-paper share.

515,957 distinct arXiv IDs, first submitted from 1 January 2016 through the recorded October 2026 cutoff. 515,921 first-version PDFs were measured; 36 lengths remain unknown.

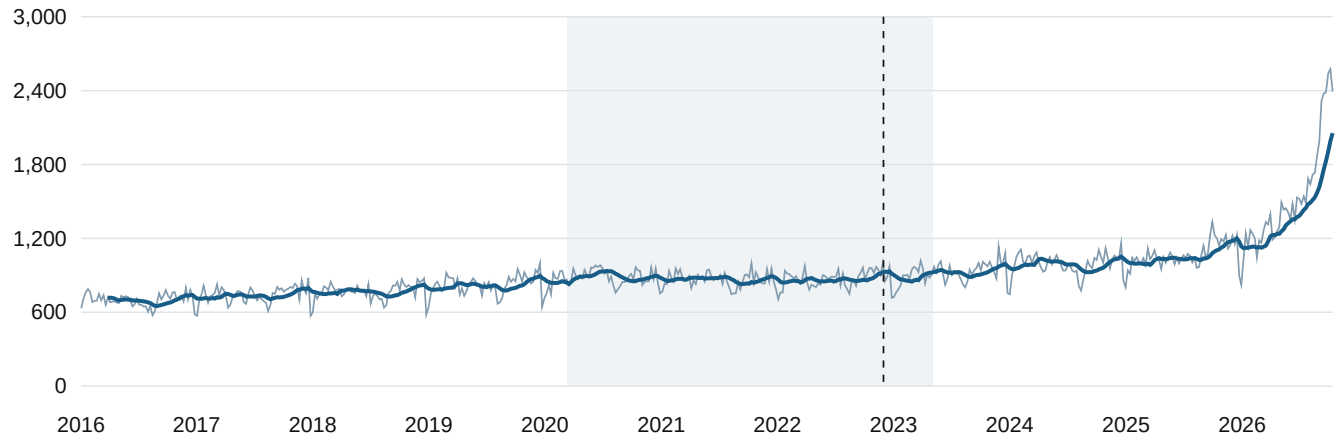
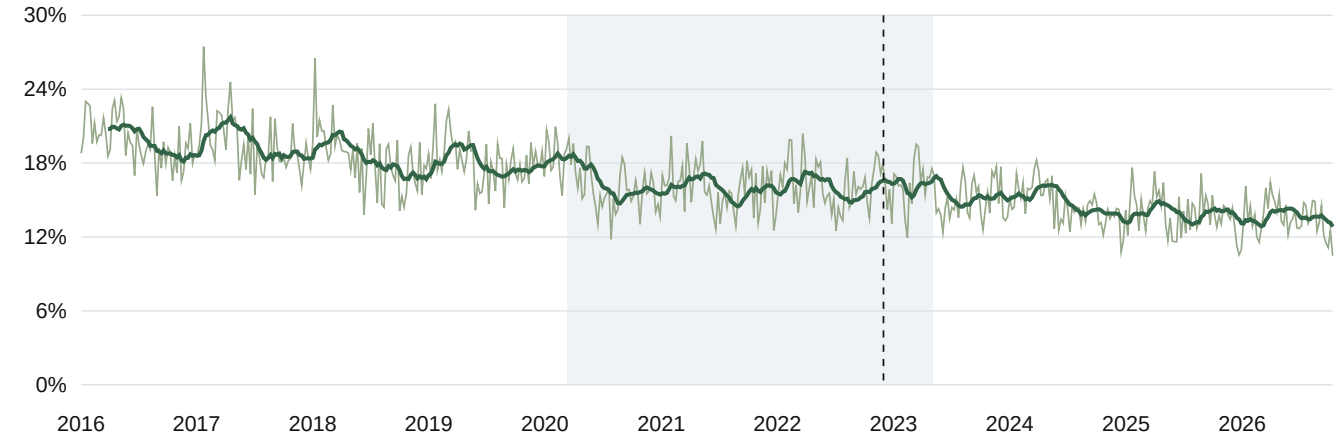
Change in <=10-page share

First submissions per week



Light line: weekly count. Dark line: 13-week trailing average.

Share of measured first-version PDFs with 10 pages or fewer



Light line: weekly share. Dark line: pooled share across 13 complete weeks.

The gray band runs from the WHO pandemic declaration (11 March 2020) to the end of the emergency (5 May 2023). The dashed line marks the public ChatGPT launch (30 November 2022). These periods overlap.

The charts do not identify AI authorship, research quality or causal effects. References, appendices and formatting affect physical PDF length.

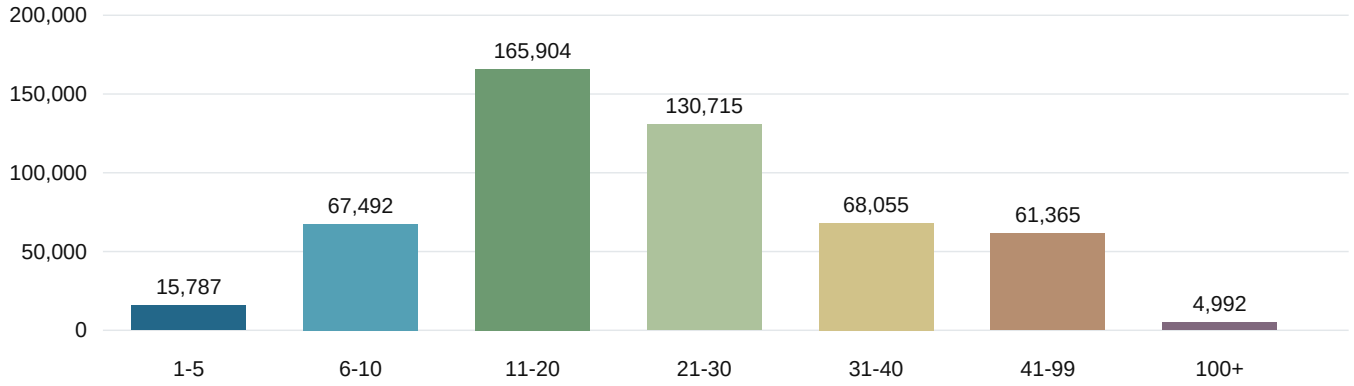
Lengths | Same seasonal coverage in each year

Length groups and fair year comparisons

All seven requested page groups are inclusive. The chart below totals measured PDFs across the complete plotted weeks. Unknown lengths are excluded from the bars and remain explicit in the dataset.

Papers in each physical page group



Matched complete weeks: ISO weeks 2-42 in every year

Year	Papers/week	<=10 pages/week	<=10 share	Median pages	PDF coverage
2016	697.8	139.6	20.0%	19	99.983%
2017	737.3	146.0	19.8%	19.0	99.993%
2018	767.9	141.9	18.5%	19	99.990%
2019	817.8	148.0	18.1%	20	99.985%
2020	884.7	148.0	16.7%	21	99.992%
2021	868.0	139.6	16.1%	21	99.992%
2022	866.2	139.1	16.1%	21	99.986%
2023	913.1	141.2	15.5%	21.0	99.995%
2024	989.8	148.1	15.0%	22.0	100.000%
2025	1,052.2	148.2	14.1%	22.0	99.995%
2026	1,549.4	207.9	13.4%	23	99.998%

The same 41 complete ISO weeks are compared in all eleven years. Cross-listings are deduplicated in the overall figures. The unfinished 2026 total is not compared with a full calendar year.

Short papers per week increased from 139.6 to 207.9 between matched 2016 and 2026 weeks, while their share fell from 20.0% to 13.4%. More short papers and a smaller short-paper share can happen together when total volume grows faster.

The short-paper share was already declining before the public ChatGPT launch: 20.0% in matched 2016 weeks, 16.1% in 2022 and 15.5% in 2023. This is descriptive evidence, not a causal estimate.

Field differences | Cross-listing membership counts

The changes were not equal across fields

Matched 2016 and 2026 weeks. Volume growth is a percent change; short-share change is measured in percentage points. The <=10-page share fell in all 32 fields. Click a field name to explore its source weeks online.

Field	2016/week	2026/week	Volume	Short share
General Mathematics	3.3	12.6	+284.3%	-17.4 pp
Optimization and Control	49.2	172.5	+250.2%	-7.4 pp
Statistics Theory	22.0	68.8	+212.7%	-3.9 pp
Numerical Analysis	44.1	128.7	+192.0%	-3.9 pp
Combinatorics	71.2	205.0	+188.1%	-4.4 pp
Category Theory	8.1	21.7	+168.3%	-2.2 pp
Analysis of PDEs	67.2	175.5	+161.2%	-2.9 pp
Metric Geometry	13.3	31.8	+138.9%	-7.2 pp
Number Theory	47.7	109.1	+129.0%	-4.6 pp
Probability	61.8	140.2	+126.8%	-2.9 pp
Functional Analysis	33.3	75.4	+126.3%	-7.9 pp
Differential Geometry	39.8	89.8	+125.7%	-7.3 pp
Spectral Theory	10.7	23.9	+124.0%	-8.3 pp
Dynamical Systems	38.8	86.5	+123.1%	-3.6 pp
Commutative Algebra	13.0	27.7	+112.4%	-9.7 pp
Group Theory	23.1	47.6	+105.8%	-4.6 pp
Algebraic Geometry	49.3	101.0	+104.9%	-5.4 pp
Logic	15.4	31.5	+104.8%	-4.2 pp
Algebraic Topology	14.8	30.2	+104.6%	-8.2 pp
Rings and Algebras	18.0	36.7	+103.5%	-7.1 pp
Complex Variables	18.6	36.6	+96.6%	-10.9 pp
Operator Algebras	12.6	24.6	+95.7%	-7.6 pp
General Topology	5.5	10.7	+93.4%	-9.0 pp
Symplectic Geometry	7.5	14.2	+88.6%	-2.2 pp
Mathematical Physics	74.3	138.2	+85.9%	-5.5 pp
Representation Theory	27.3	50.1	+83.6%	-2.4 pp
History and Overview	4.2	7.6	+78.2%	-6.6 pp
Geometric Topology	21.9	38.3	+75.3%	-4.7 pp
Quantum Algebra	13.5	23.2	+72.6%	-2.3 pp
Information Theory	64.0	104.9	+63.9%	-10.9 pp
Classical Analysis and ODEs	28.2	41.8	+48.5%	-9.3 pp
K-Theory and Homology	5.8	7.8	+34.6%	-6.0 pp

Field totals overlap because a paper can be cross-listed. Small fields have greater natural variation. A decline in short-paper share is not evidence about mathematical quality.

Primary-only counts give 108.3% overall volume growth and a short-share decline from 19.51% to 13.09%. With the fixed 2016 primary-field mixture, the 2026 share is 13.62%. The decline persists after this descriptive composition adjustment.

Separate context periods, rather than a single LLM breakpoint

Context period	Weeks	Papers/week	<=10 share
Before WHO declaration	218	763.5	18.8%
WHO declaration to ChatGPT	141	874.3	16.1%
ChatGPT to WHO emergency end	21	880.8	16.2%
After WHO emergency end	180	1129.7	14.1%

Only complete weeks contained entirely within each period are counted. Milestone-crossing weeks are excluded. These averages are not adjusted for seasonality or pre-existing trends; the WHO emergency end does not mean COVID ended.

Unit and scope: one base arXiv ID, dated by first submission. Revisions do not add papers. Different IDs for the same intellectual work are not content-deduplicated. Category tags, titles and authors are current at metadata retrieval; historical category changes are not reconstructed.

Length and missingness: physical version-1 pages include references and appendices. Missing PDFs remain unknown, never zero-page or short papers. Full-file checks supported the range-count method; all 130 metadata partitions reconcile with retained API responses.

Interpretation: the data do not reveal AI authorship, acceptance, research quality or effort. COVID, prior growth, author population, field composition, formatting and arXiv coverage may all matter. The timeline now includes 2016-2018; both the comparison and field-mixture baseline use 2016. Modelling seasonality and existing trends remains useful.
